Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GRADA,

ATP Sulfurylase, large subunit XF1501 [imported] - Xylella fastidiosa (strain 9a5c)
C;Species: Xylella fastidiosa
C;Species: B-Aug-2000 #sequence_revision 20-Aug-2000 #text_change 02-Sep-2000
C;Accession: G82672
R;anonymous, The Xylella fastidiosa Consortium of the Organization for Nucleotide Seq
Nature 406, 151-157, 2000
A;Title: The genome sequence of the plant pathogen Xylella fastidiosa.
A;Reference number: A82515; MUID:20365717

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Description: as adenylylsulfate kinase catalyzes the phosphorylation of adenylylsulfat
C;Function: <SATF>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A. Description: as sulfate adenylyltransferase catalyzes the reaction of sulfate and ATP C. Superfamily: animal 3'-phosphoadenosine-5'-phosphosulfate synthetase; adenylylsulfate C. Keywords: multifunctional enzyme; nucleotide binding; nucleotidyltransferase; P-loop; F. 37-200/Domain: adenylylsulfate kinase homology <ASK>
F. 34-51/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2.7.7

ATP SULFORFILES MY BE THE GTPASE, REGULATING ATP SULFURYLASE ACTIVITY (BY SIMILARITY).

-!- FUNCTION: APP KINASE CATALYZES THE SYNTHESIS OF ACTIVATED SULFATE (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: ATP + sulfate = diphosphate + adenylylsulfate.

-!- CATALYTIC ACTIVITY: ATP + adenylylsulfate = ADP + 3'-
                                                               -!- SIMILARITY: IN THE N.TERMINAL SECTION; BELONGS TO THE GTP-BINDING ELONGATION FACTOR FAMILY. CYSN/NODQ SUBFAMILY.
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO THE APS KINASE

Site-selected mutagenesis of a conserved nucleotide binding HXGH
motif located in the ATP sulfurylase domain of human bifunctional
3 'phosphoadenosine 5'-phosphosulate synthase.";
J. Biol. Chem. 274:2601-2604(1999).
C -!- FUNCTION: BIFUNCTIONAL BRYANE MYME WITH BOTH ATP SULFWIZE
C KINASE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE
C CROUP TO ATP TO YIELD ADENOSINE 5'-PHOSPHOSULFATE (ARS), AND THE
C SULFATE, ADENOSINE 5'-PHOSPHOSULFATE (ARS), AND THE
C SULFATE, AND ADENOSINE 5'-PHOSPHOSULFATE (ARS). SULFATE DONOR
C USED BY SULFOTRANSFERROR DE NOTY AN INTERMEDIATE IN THE SULFATE.

SULFATE, APS APPERAS TO BE ONLY AN INTERMEDIATE IN THE SULFATE.

SULFATE, APS APPERAS TO BE ONLY AN INTERMEDIATE IN THE SULFATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACTIVATION PATHMAY. ALSO INVOLVED IN THE BIOSYNTHESIS OF SULFATED L-SELECTIN LICANDS IN ENDOTHELLAL CELLA.
-!- CAPALYTIC ACTIVITY: APP + SULfate = diphosphate + adenylylsulfate.

Biol. Chem. 270:29453-29458(1995).

J. Biol. Chem. 270:29453-29458(1995).

FINIASE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE GROUP TO ATP TO YIELD ADENOSINE 5'-PHOSPHOSULFATE (APS), AND THE SECOND STEP IS THE TRANSFER OF A PHOSPHOSULFATE (APS), AND THE STOND STEP IS THE TRANSFER OF A PHOSPHOSULFATE (APS) AND THE STEP IS THE TRANSFER OF A PHOSPHOSULFATE (APS) AND THE SULFATE DONOR STELLING 3'-PHOSPHOADENSYLISULFATE (APS) ACTIVITYED SULFATE DONOR USED BY SULFOTRANSFERASE). IN MAWMALS, PAPS IS THE SOLE SOURCE OF SULFATE: APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE.

PATHWAY: BELONGS TO THE SULFATE ASSIMILATION PATHWAY THAT LEADS TO THE BIOSYNTHESIS OF CYSTEINE AND METHIONINE, AND TO THE SULFATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     KINSE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE
GROUP TO ATP TYPE INSTEAD IS THE TRANSFER OF A SULFATE
GROUP TO ATP TO YIELD ADENOSINE 5. * PHOSPHOSULFATE (AFS), AND THE
SECOND STEP IS THE TRANSFER OF A PHOSPHOSULFATE (AFS), AND THE
SECOND STEP IS THE TRANSFER OF A PHOSPHOSULFATE GROUP FROM ATP TO APS
VIELDING 3.*-PHOSPHOADENYLYLSULFATE (PAPS: ACTIVATED SULFATE DONOR
USED BY SULFOTRANSFERASE). IN MAMMALS, PAPS IS THE SOLE SOURCE OF
SULFATE, APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE-
ACTIVATION PATHWAY. ALSO INVOLVED IN THE BIOSYNTHESIS OF SULFATED
L-SELECTIN LIGANUS IN ENDOTHELIAL CELLS (BY SIMILARITY).

CATALYTIC ACTIVITY: ATP + SULFATE = diphosphate + adenylylsulfate.

CATALYTIC ACTIVITY: ATP + adenylylsulfate = ADP + 3'-
